SUMMARY

Software engineer with 3+ years shipping production backends, data pipelines, and security tooling on AWS and Azure. I design Python and C# REST APIs, run ETL pipelines at 8M+ rows/day, build detection automation on Splunk and MITRE ATT&CK, and run the Claude API in production via Orkes Conductor with p50/p95 and token-cost instrumentation. I own systems from threat model to CI.

EDUCATION

Stevens Institute of Technology, Hoboken, NJ

Jan 2022 - Dec 2023

MS Computer Science; Graduate Certificate in Cybersecurity

Marwadi University, Rajkot, India

Jun 2018 - May 2021

Bachelor of Computer Applications

EXPERIENCE

Unique Design Inc., Secaucus, NJ - Software Developer

Apr 2025 - Jul 2026

- Built ETL pipelines with SSIS from Sybase/PostgreSQL into AWS RDS - processing 8M+ rows daily, driving Tableau dashboards for 250+ users, and feeding SIEM incident data into analyst triage queues and reporting KPIs.
- Architected C# modules and Bash automation on UNIX/Windows to query SQL Server and PostgreSQL, cutting document and metadata retrieval latency by 60%.
- Developed correlation logic and triage workflows for Splunk SIEM alerts across customer environments, filtering out false positives and escalating confirmed incidents to meet detection and response SLAs.

Dianco Inc., New York City, NY - Software Engineer

Mar 2024 - Apr 2025

- Engineered SSIS-based ETL pipelines and SQL synchronization logic to move PostgreSQL e-commerce data into SQL Server, eliminating 95% of sync errors and saving 10 hours of manual work weekly.
- Wrote Python automation to parse and correlate firewall logs in real time, integrating with Splunk to surface security incidents within 5 minutes of detection.
- Implemented Azure IaaS and Front Door CDN across the production environment, applying CIS Level 1 hardening to maintain 99.25% uptime.

iTechNuts Solutions, Ahmedabad, India - Software Engineer

Jan 2021 - Mar 2022

- Developed and maintained gameplay features and backend logic for educational mobile games published to the Apple App Store and Google Play Store, collaborating with designers to ship engaging, age-appropriate learning experiences.

PROJECTS

AI-Powered Log Analyzer (Python, Claude Code, Claude API, Docker, GitHub Actions) - Spring 2026 | github.com/Romil2112/log-analyzer

- Built a Python security CLI parsing SSH, Windows, and Apache/Nginx logs - brute-force/port-scan/web-scan detection, Isolation Forest ML scoring, MITRE ATT&CK mapping (T1110.001, T1046, T1595.002); a labeled eval harness raised detection precision to 1.0.
- Added threat-intel/GeoIP enrichment and native SIEM export (SPL/ES|QL/KQL with CIM/ECS/ASIM schemas) via pySigma; cut the brute-force detector to a linear sweep (69x faster) and orchestrated detectors, ML, and Claude summaries in an Orkes Conductor fork/join workflow with concurrent retry/backoff, instrumented for p50/p95 latency and token cost.
- Deployed via Docker Compose and GitHub Actions CI/CD (225 pytest tests); detection-tuning flags (threshold config, allowlist, suppress-repeats, A/B comparison) and a precision/recall/F1 eval mode; privacy controls (encryption, PII scrubbing, retention); pushes incidents with run id and task timings to the SOC Dashboard via REST.

SOC Dashboard (Python, Flask, PostgreSQL, Chart.js) - Spring 2026 | github.com/Romil2112/SOC-Dashboard

- Built a full-stack triage dashboard: REST alert-ingestion API (from the Log Analyzer), severity-ranked queue, one-click triage, and run provenance per alert; secured with Flask-Login/bcrypt auth, RBAC (viewer/analyst/admin), CSRF + HMAC-verified API key, Fernet encryption at rest, and an atomic audit trail with Fernet-encrypted case notes, searchable by admins.
- Aggregated SOC KPIs (MTTR, per-severity SLA tiers, escalation rate) via a single aggregate JOIN (~2x faster stats); Chart.js filters with saved presets and SSE real-time delivery; 75-test pytest + PostgreSQL suite at 95% line / 92% branch coverage in GitHub Actions CI.

Face Tracking System (Python, FastAPI, OpenCV, Docker, Claude API) - Spring 2025 | github.com/Romil2112/Face-Tracking-System

- Built a fault-tolerant real-time computer-vision pipeline: hybrid ResNet-SSD + Haar Cascade detector with CUDA/OpenCL acceleration, circuit-breaker error recovery, and adaptive frame-skipping.
- Engineered multi-layer fault tolerance (CUDA -> OpenCL -> CPU fallback, camera reconnect, DNN-to-Haar detector fallback) with exponential-backoff retries and temporal filtering across 5-frame windows; packaged as a production FastAPI microservice with per-IP rate limiting (slowapi), Prometheus /metrics, bounded concurrency / backpressure (503 on overflow), mediapipe EAR liveness detection (anti-spoofing), and Claude Haiku triage notes on low-confidence detections; 224 pytest tests in CI across Python 3.10-3.12.

SKILLS

Programming & Backend: Python, C#/.NET, Java, C++, Bash, PowerShell; REST API design (Flask, FastAPI)

Data & Pipelines: SQL Server, PostgreSQL, MySQL, Sybase, ETL pipelines, SSIS, AWS RDS, scikit-learn (Isolation Forest anomaly detection), NumPy

Cloud & Infra: AWS (EC2, RDS, S3), Azure IaaS, Azure AD / SSO (SAML), UNIX, Windows Server

DevOps & Tooling: Docker, GitHub Actions CI/CD, Prometheus, Azure DevOps, Git, pytest

LLM & AI Tools: Generative AI, Large Language Models (LLMs), Claude Code (Anthropic), Claude API, prompt engineering, agentic workflows & orchestration, Orkes Conductor (durable workflow orchestration), concurrent batched LLM calls, token-cost/p50/p95 latency instrumentation

Security Domain: Splunk/Elastic/Sentinel SIEM, Sigma detection-as-code, detection-rule versioning, precision/recall/F1 evaluation harness, firewall log analysis, MITRE ATT&CK, CIS Level 1 hardening, Incident Response; Flask-Login/bcrypt auth, role-based access control (RBAC), atomic audit trails, Fernet field-level encryption + HMAC integrity, PII/IP scrubbing & pseudonymization, data-retention controls

Visualization: Tableau, Chart.js, Visio, OpenCV, mediapipe
