SUMMARY

Software Engineer with 3+ years building production backend services, REST APIs, and data pipelines in Python, C#, and Java across AWS and Azure. I design and optimize SQL schemas and APIs, run ETL pipelines that move 8M+ rows/day, and ship clean, well-tested code with Docker and GitHub Actions CI/CD. I also integrate the Anthropic Claude API into production tooling. MS in Computer Science.

SKILLS

Programming & Backend: Python, C#.NET, Java, C++, Bash, PowerShell; REST API design (Flask, FastAPI)

Data & Pipelines: SQL Server, PostgreSQL, MySQL, Sybase, ETL pipelines, SSIS, AWS RDS, scikit-learn (Isolation Forest anomaly detection), NumPy

Cloud & Infra: AWS (EC2, RDS, S3), Azure IaaS, Azure AD / SSO (SAML), UNIX, Windows Server

DevOps & Tooling: Docker, GitHub Actions CI/CD, Azure DevOps, Git, pytest

LLM & AI Tools: Generative AI, Large Language Models (LLMs), Claude Code (Anthropic), Claude API, prompt engineering, agentic workflows & orchestration, Orkes Conductor (durable workflow orchestration), concurrent batched LLM calls, token-cost/latency instrumentation

Security Domain: Splunk/Elastic/Sentinel SIEM, Sigma detection-as-code, firewall log analysis, MITRE ATT&CK, CIS Level 1 hardening, Incident Response; Flask-Login/bcrypt auth, Fernet field-level encryption + HMAC integrity, PII/IP scrubbing & pseudonymization, data-retention controls

Visualization: Tableau, Chart.js, Visio, OpenCV

EXPERIENCE

Unique Design Inc., Secaucus, NJ - IT Analyst

Apr 2025 - Present

- Architected C# modules and Bash automation on UNIX/Windows to query SQL Server and PostgreSQL, cutting document and metadata retrieval latency by 60%.
- Developed and debugged services across development, test, and production environments while maintaining 24/7 operational reliability.
- Automated end-to-end ETL pipelines with SSIS from Sybase/PostgreSQL into AWS RDS, processing 8M+ rows daily and driving Tableau dashboards for 250+ users.
- Built ETL feeds delivering SIEM and incident data into analyst dashboards alongside the SOC team, turning raw logs into triage and reporting KPIs.

Dianco Inc., New York City, NY - Developer / IT Administrator

Mar 2024 - Apr 2025

- Deployed SSIS packages and supporting SQL logic to synchronize PostgreSQL e-commerce data into SQL Server, reducing synchronization errors by 95% and saving 10 hours weekly.
- Automated firewall log parsing using Python scripts, enabling incident detection in under 5 minutes via Splunk notifications.
- Configured Azure IaaS and Front Door CDN; implemented CIS Level 1 hardening to maintain 99.25% uptime.

iTechNuts Solutions, Ahmedabad, India - Software Engineer

Jan 2021 - Mar 2022

- Developed and maintained gameplay features and backend logic for educational mobile games published to the Apple App Store and Google Play Store, collaborating with designers to ship engaging, age-appropriate learning experiences.

PROJECTS

AI-Powered Log Analyzer - Python, Claude Code, Claude API, Docker, CI/CD | github.com/Romil2112/log-analyzer

- Built a Python log-analysis pipeline parsing SSH, Windows, and Apache/Nginx logs with Isolation Forest ML scoring, brute-force/port-scan/web-scan detection, and MITRE ATT&CK mapping; a labeled eval harness raised detection precision to 1.0.
- Added threat-intel/GeoIP enrichment and detection-as-code to Splunk/Elastic/Sentinel via pySigma; cut the brute-force detector to a linear sweep (69x faster) and orchestrated detectors, ML, and Claude summaries in a durable Orkes Conductor fork/join workflow with a concurrent retry/backoff batch layer, instrumented for token cost and latency.
- Deployed with Docker Compose (PostgreSQL + analyzer) and GitHub Actions CI/CD (195 pytest tests), with privacy controls (encryption, PII scrubbing, retention); pushes each incident with run id and task timings to the SOC Dashboard via REST.

SOC Dashboard - Python, Flask, PostgreSQL, Chart.js | github.com/Romil2112/SOC-Dashboard

- Built a full-stack triage dashboard with a REST alert-ingestion API (fed by the Log Analyzer above), a severity-ranked queue, one-click triage, and upstream run provenance (workflow run id + per-task timings) shown per alert; secured with Flask-Login/bcrypt auth, API-key-gated ingestion, and Fernet encryption at rest.
- Designed SQL aggregation queries for SOC KPIs (MTTR, SLA-breach rate, escalation rate), collapsing an N+1 query into one aggregate JOIN (~2x faster stats); Chart.js filters by severity, source, and assignee; covered the API with a 48-test pytest + PostgreSQL suite in CI.

Face Tracking System - Python, FastAPI, OpenCV, Docker | github.com/Romil2112/Face-Tracking-System

- Built a fault-tolerant real-time computer-vision pipeline: hybrid ResNet-SSD + Haar Cascade detector with CUDA/OpenCL acceleration, circuit-breaker error recovery, and adaptive frame-skipping.
- Engineered multi-layer fault tolerance (CUDA -> OpenCL -> CPU fallback, camera reconnect, DNN-to-Haar detector fallback) with exponential-backoff retries and temporal filtering across 5-frame windows.
- Packaged as a containerized FastAPI microservice (POST /detect -> JSON) plus a headless CLI, with 204 pytest tests in CI across Python 3.10-3.12.

EDUCATION

Stevens Institute of Technology, Hoboken, NJ

Jan 2022 - Dec 2023

MS Computer Science; Graduate Certificate in Cybersecurity

Marwadi University, Rajkot, India

Jun 2018 - May 2021

Bachelor of Computer Applications
